

6. ARRAY PICKER

| PROPERTY | DESCRIPTION |
|---|--|
| value Index (read/write Number) | The current value of the knob control |
| array (read/write Array) | <p>An array containing Strings or other data types. The elements in the array determine the available options for selection using this control.</p> <p>Array elements are displayed as text on a list that pops up on tapping the control. The selected element is displayed as a text label in the control.</p> <p>Example: ["One", "Two", "Three"]</p> |
| format (FormatString, read/write String) | <p>A format String for texts on the pop up list and the text label displayed by the control. See format specifiers and the format function for a complete discussion on possible values.</p> <p>Example: "Option %s"</p> |
| color Color (read/write String or Number) | The color of the array picker control. See description of the <i>color</i> property on the page object for a discussion on possible values. |
| linkToPages Array (read/write Array) | <p>An array of strings matching page <i>pageIdentifier</i>. Any change on the array picker value will cause the interface to switch to the page matching the identifier at the value index.</p> <p>Example: ["PageOne", "PageTwo", "PageThree"]</p> <p>Upon selecting the first segment (the value property is 0) the interface will switch to page with identifier "PageOne" and so on.</p> |
